NRG Oncology New Investigator Liaison Responsibilities

NRG Oncology New Investigator Liaisons will be designated by each NRG Oncology Disease Site Committee Co-Chairs.

The New Investigator Liaison will be responsible for assisting with the engagement and education of the NRG Oncology New Investigator Committee Members assigned to them by the NRG Oncology New Investigator Committee Co-Chairs. Liaisons will be tasked with participating in the monthly NRG Oncology New Investigators Committee and Working Group calls and attending all New Investigators Committee-led sessions at the NRG Oncology Semiannual Meetings.

Liaisons are not expected to mentor the individual new investigator members that are assigned to them, however, liaisons will be asked to ensure their new investigators are connected with mentors, informed of new trials being developed within the specific disease site committee, and ensuring the new investigator is involved with the NRG Oncology organization in some capacity via trials, ancillary projects, disease site or administrative committees, etc. Additionally, new investigators should be encouraged and given the opportunity to present their own concepts to the disease site committee for prospective and/or ancillary trials.

Liaisons will be asked to report the progress of their group to the NRG Oncology New Investigator Co-Chairs, Working Group, and other liaisons at each NRG Oncology Semiannual Meeting. Liaisons will be provided Liaison Score Cards when selected as well as a list of their assigned group for ease of tracking and communication.
