A COLORECTAL CANCER PREVENTION TRIAL

In partnership with the leadership at the NCI Division of Cancer Prevention, NRG Oncology has proposed modifications in size and other minor changes relating to some of the logistics of NRG-CC005 (FORTE). The proposed changes will allow us to assess the study's primary and secondary endpoints more quickly, requiring fewer patients. While we have reached consensus on these points, the process has delayed the opening of FORTE until early 2021.

We remain committed to activating FORTE as soon as possible and are deeply grateful for your interest and commitment to help this study be a success. We will be planning a FORTE workshop in January 2021 in conjunction with the NRG Oncology Winter 2021 Virtual Meeting and will share more information as it becomes available.

Please email Christine Lorson at lorsonc@nrگونcology.org with FORTE questions.
